Motorcycle 14 | Environmentally Sensitive 16 | Network & Customer 18 | Serial Number 20

Application

Engine | Transmission | Wheel | Steering & Suspension | Motorcycle

Infinite challenge for the best is the spirit of Schaeffler Korea Corp.

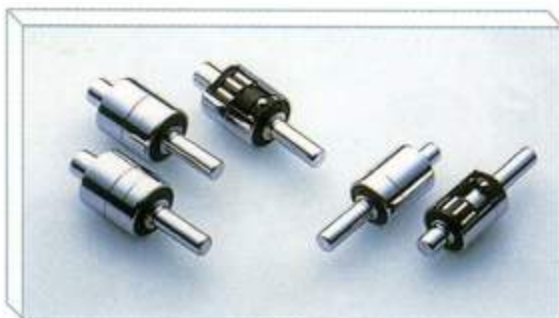

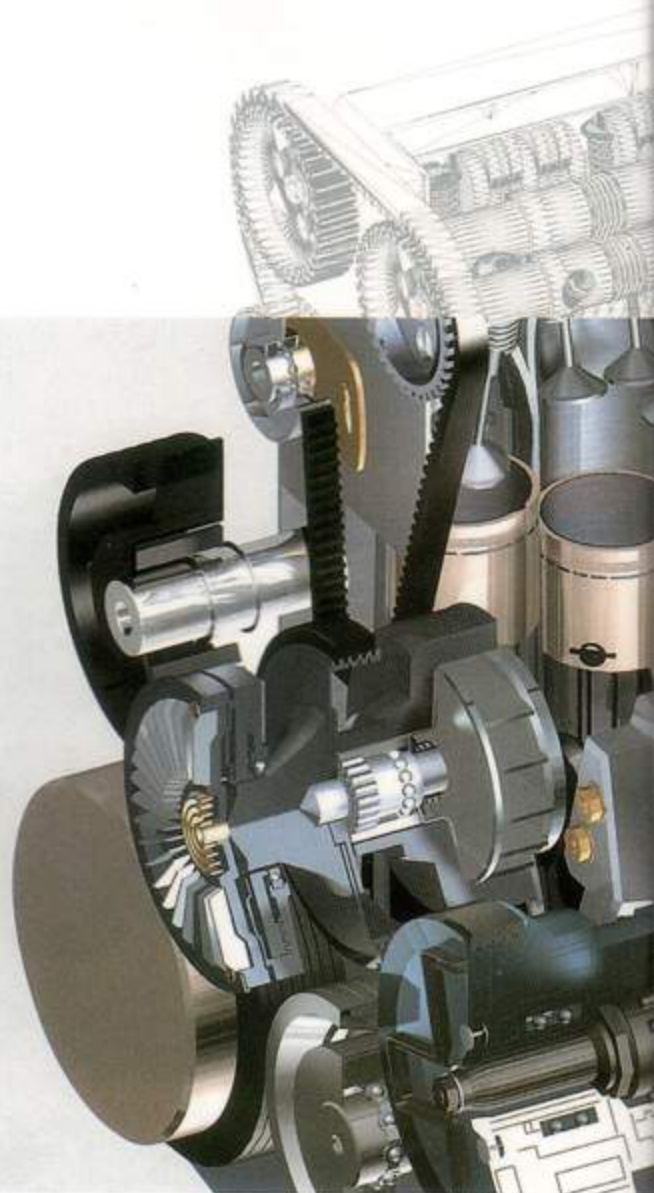

The bearings industry plays a key role in many industries-Automotive, Motorcycle, Electronics, Aircraft, Automation, etc. Schaeffler Korea has been a premier supplier of high tech bearings for more than 50 years. Our advanced product developments have resulted in lowered torque, reduced noise, higher precision, and improved fatigue life for many customer applications. Furthermore, these impressive innovations have been delivered to our customers in more than 70 countries around the world!

Ball Bearings for Alternators

- **Function:** Supports Electric Generator Rotor
- **Features:** Introduction of EC type to avoid creep in outer ring. Optimized design for high capacity and high speed rolling at high temperatures.

Water Pump Bearings

- **Function:** Circulates vehicle cooling fluid.
- **Features:** Advanced seal design to prevent moisture contamination. Flexible designs include both ball-ball and ball-roller types for a wide range of engine applications.

Ball Bearings for Power Steering Oil Pump

- **Function:** Supports the compression reaction pump for proper movement of system.
- **Features:** Special seals guard against excessive internal bearing pressure.

Engine | APPLICATION

Ball Bearings for Idler Pulley

- **Function:** Guides engine belt with proper tension
- **Features:** Optimized seal design to prevent moisture intrusion from wide temperature delta

Air-Con. Compressor Bearings

- **Function:** Provides input pulley support for proper electronic clutching of the A/C compressor.
- **Features:** Precision double row angular contact ball bearing. Internal design is optimized for high temperature /high speed rolling.

Ball Bearings for Starters

- **Function:** Supports a starter rotor for commercial vehicles.
- **Features:** Reinforced seals prevent intrusion of foreign substances.

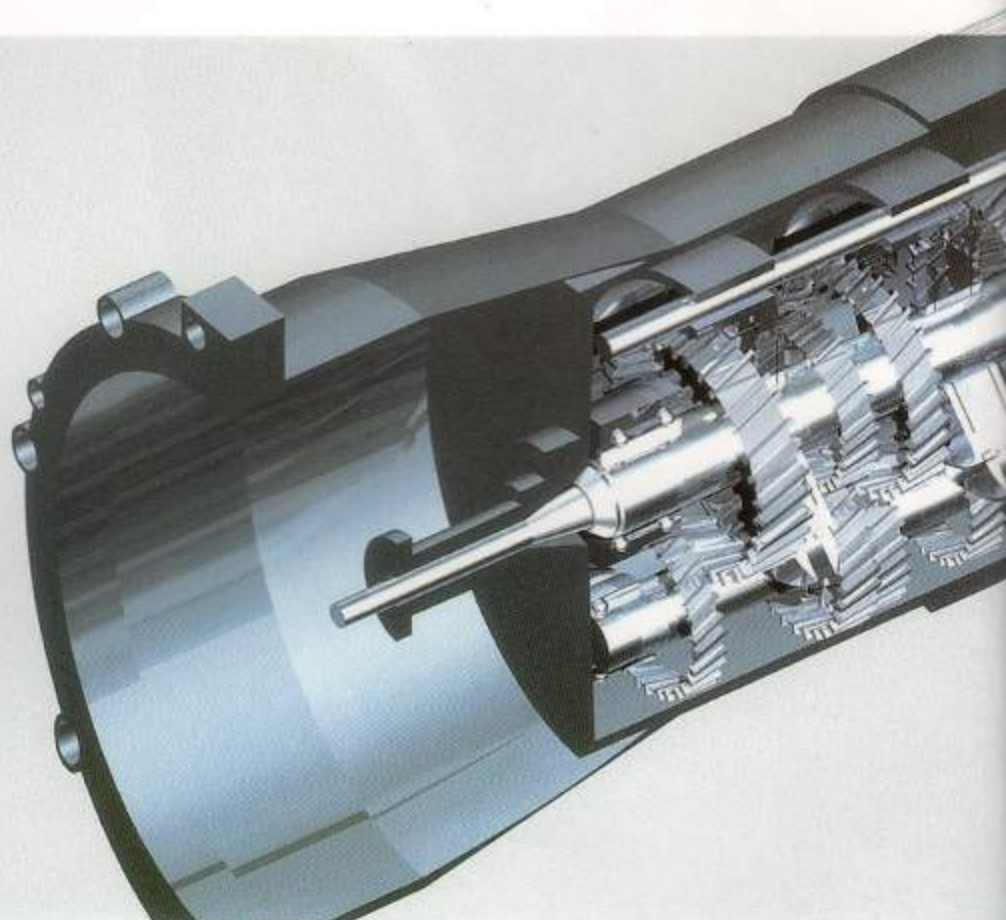

Deep Groove Ball Bearings

- **Function:** Bi-directional transmission axis support,
- **Features:** Good capacity performance under marginal lubrication conditions,

Cylindrical Roller Bearings

- **Function:** Increased capability for radial load support,
- **Features:** High capacity performance in a compact cross-section,

Double Row Angular Contact Ball Bearings

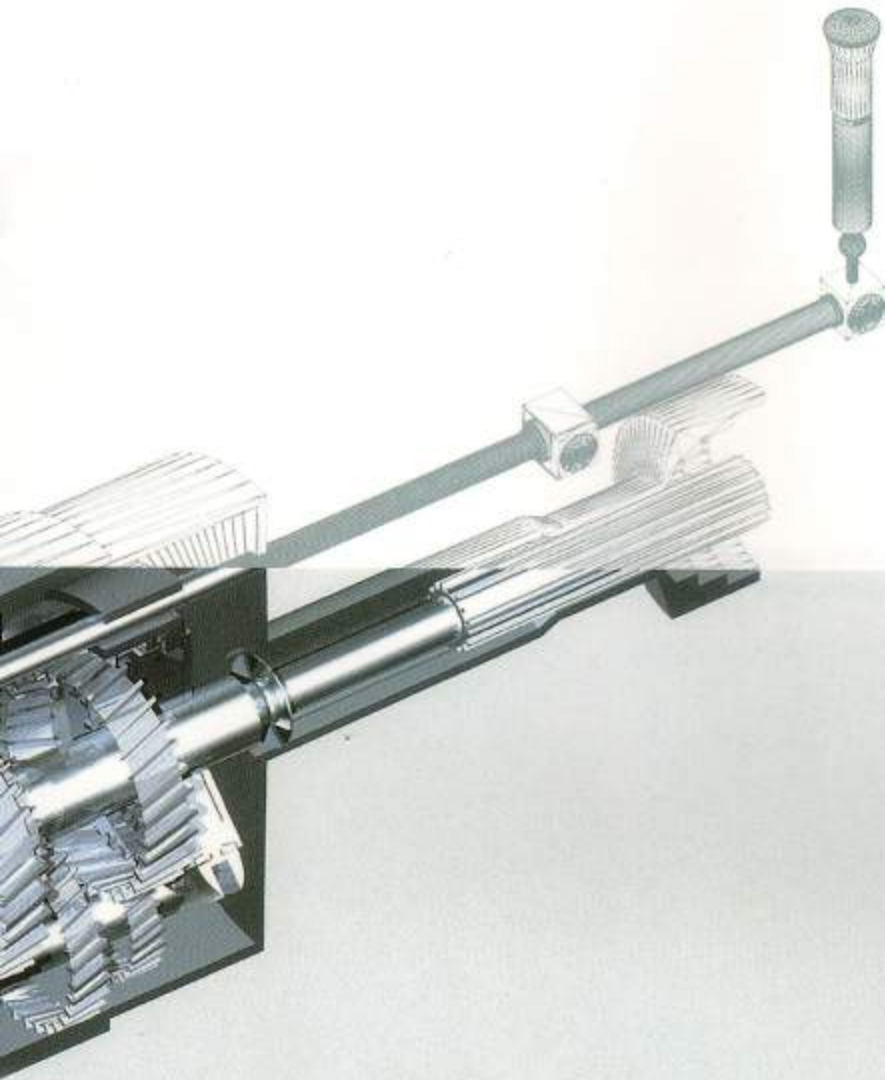

- **Function:** Unitized combination of both radial and axial shaft support,
- **Features:** Increased durability under influence of contamination

Needle Roller & Cage Assemblies

- **Function:** Supports gears and provides smooth relative rotation of gears,
- **Features:** Increased efficiency due to reduction of gear friction and superior performance with minimal lubrication,

Transmission | APPLICATION

Tapered Roller Bearing

- Function: transmission shaft support,
- Features: Increased durability under influence of application contamination

Double Tapered Roller Bearings with Flange

- Function: Bi-directional transmission shaft support,
- Features: Simplify mounting, provide increased durability under influence of contamination and guard against overload conditions,

Pinion Shafts

- Function: Support planet gears against A/T sun gear,
- Features: Special heat treatment and high precision processing for extended life performance,

Ball Type Hub Unit Bearings

Generation I

- **Function:** Support automotive vehicle weight and axial load from cornering.
- **Features:** Holds suitable internal clearance for extended life performance.

Generation II

- **Function:** Provide driven wheel support of automotive weight and axial load.
- **Features:** Maintains proper internal clearance for extended life performance. Offers convenient assembly on vehicle while reducing weight due to its single body housing.

Generation III

- **Function:** Similar to generations 2&3.
- **Features:** Added convenience of assembling a single body housing and shaft unit with ABS sensor built in.

Wheel | APPLICATION

Taper Type Hub Unit Bearings

Generation I

- Function: Provide driven wheel support of for higher automotive weight and higher axial load applications.
- Features: Holds suitable internal clearance for extended life performance

Generation II

- Function: Provide driven wheel support of vehicle weight and axial loading.
- Features: Maintains proper internal clearance for extended life performance. Offers convenient assembly on vehicle while reducing weight due to its single body housing.

Generation III

- Function: Similar to generations 2&3, Higher capacity tapered roller design typically suited to larger vehicles and/or truck platforms.
- Features: Provides convenience of assembling a single body housing and shaft unit with ABS sensor built in. Added benefits include reduced assembly time and reduced system weight. The result is overall improved customer efficiency with reduced cost.

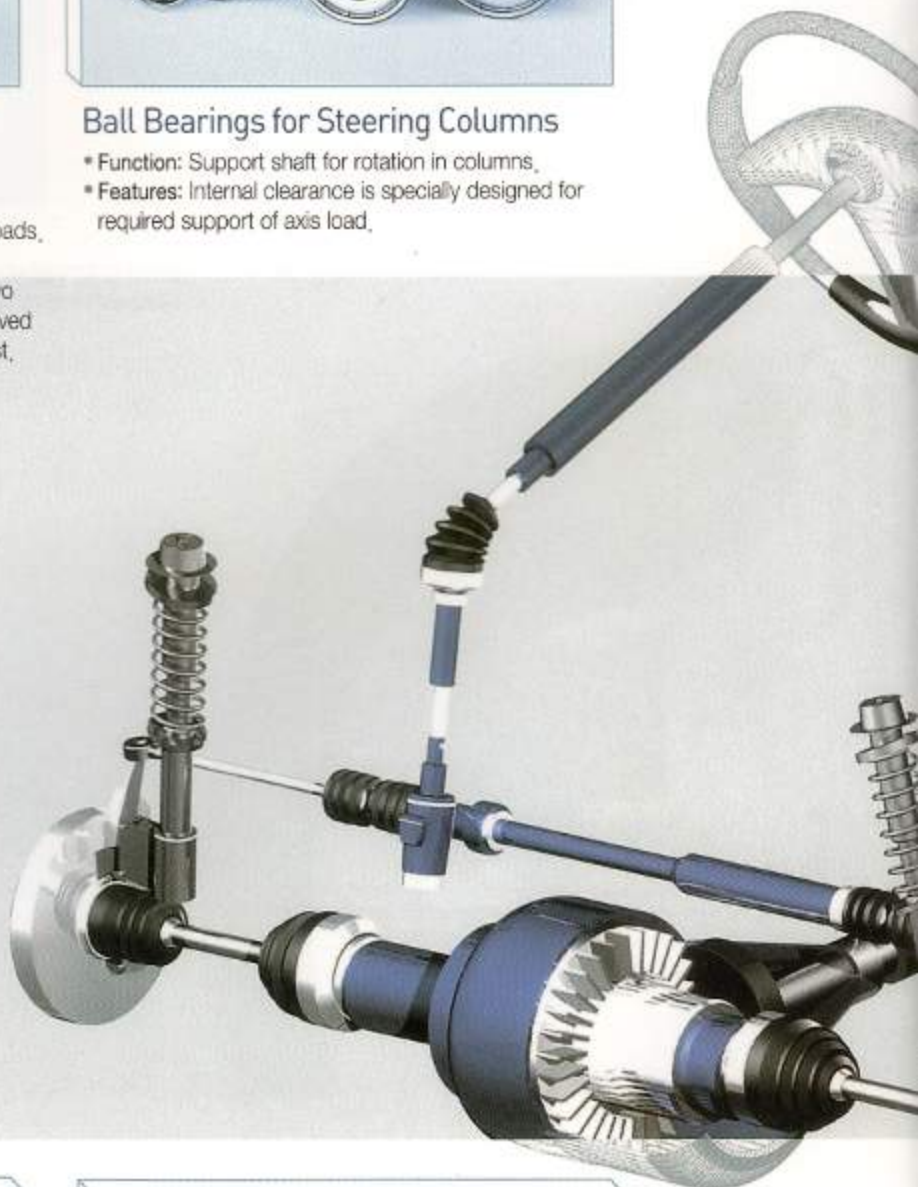

4-Point Ball Bearings for steering Gear & Suspension

- **Function:** Support shaft for rotation in gear. Provides bi-directional axial support for helical gear loads. Also used in strut mount applications.
- **Features:** One bearing can perform the function of two bearings under controlled conditions. Result is improved design efficiency and reduced unit and assembly cost.

Ball Bearings for Steering Columns

- **Function:** Support shaft for rotation in columns.
- **Features:** Internal clearance is specially designed for required support of axis load.

Needle Roller & Tripod Roller for C.V.Joints

- **Function:** Allows for transfer of constant angular velocity and torque.
- **Features:** Permits continuously changing load direction within the tripod housing.

Thin Section Bearings for steering Column

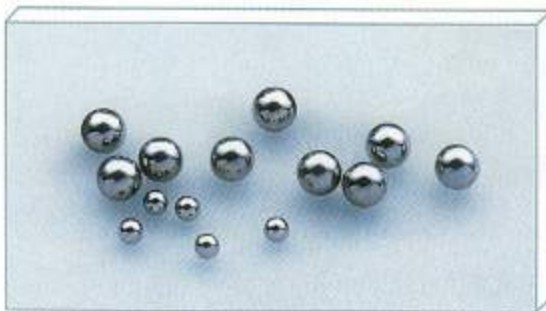

- **Function:** Same as other radial deep groove ball bearing assemblies.
- **Features:** Thinner width than standard bearings allows for more complex application structures.

Steering & Suspension | APPLICATION

Plastic Bearings for Suspension

- Function: Reduction of friction and torque for special application environments.
- Features: Plastic materials offer built-in lubrication and anti-abrasion properties within a compact and light envelope package with relatively high load carrying capacity.

Steel Balls for C.V.Joints

- Function: Conveyance of constant angular velocity and torque.
- Features: Applications for high bending angular BJ, RJ & CG types

Thrust Ball Bearings for Suspension

- Function: Typical applications include automotive strut mounts and motor cycle fork mounts.
- Features: Suited for high thrust load support with minimal movement and/or radial load.

Deep Groove Ball Bearings

- **Function:** Engine crank shaft, cam shaft or T/M shaft support.
- **Features:** Special heat treatment is performed for inner ring, outer ring and cage where extended life performance is a necessary focus of the application design. These designs are well suited to high speed and high temperature conditions.

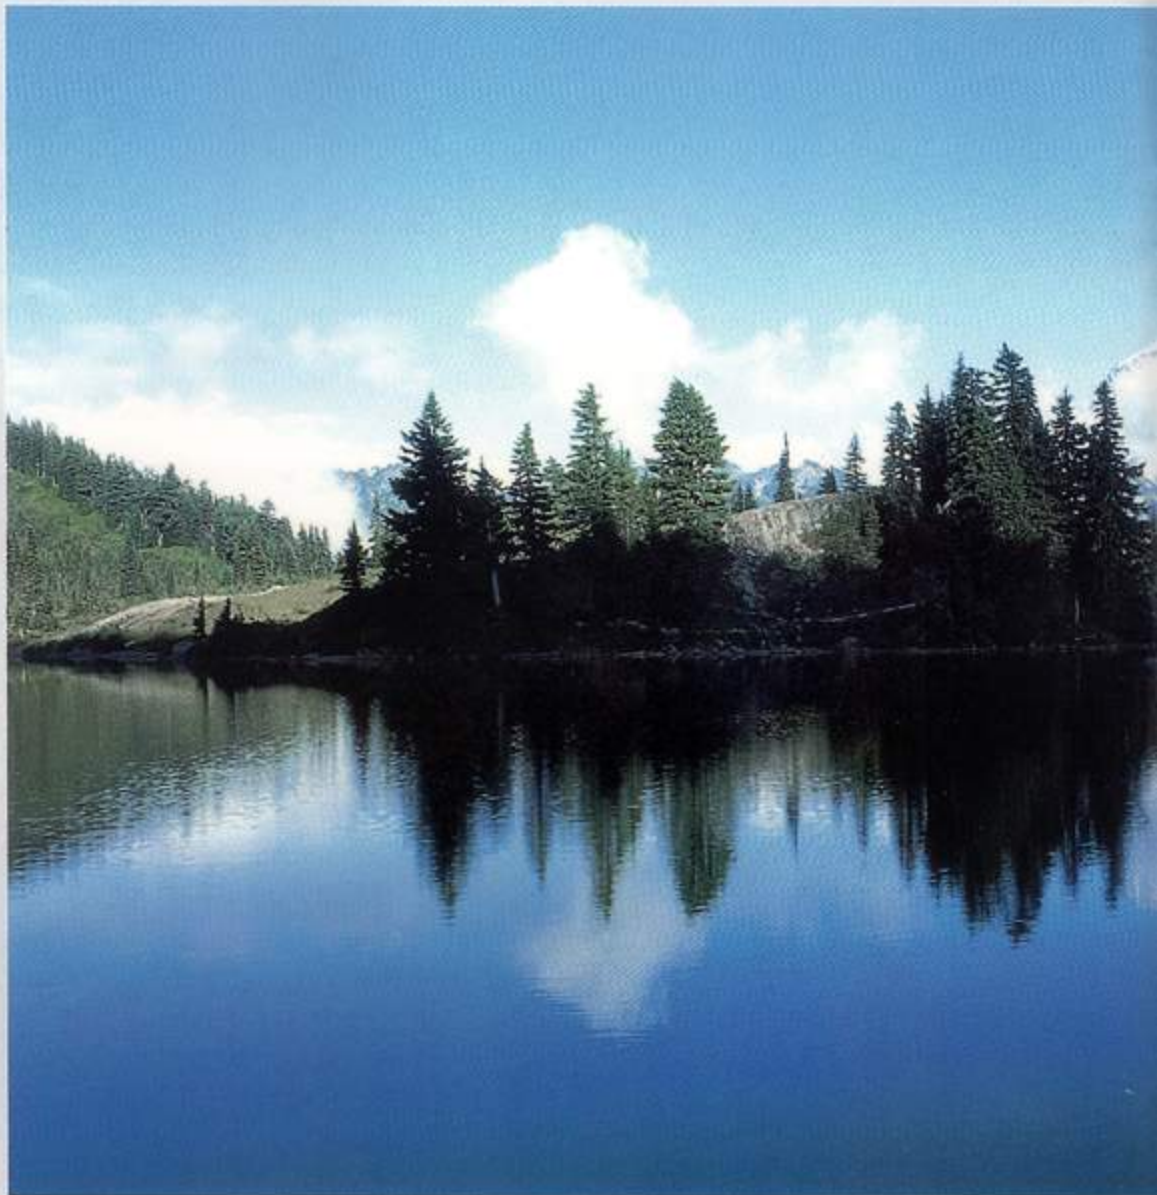

Special Thrust Ball Bearings

- Function: Steering column support,
- Features: Support of axial load within a limited space,

➤ Protecting the environment: Blending technology with nature as a top priority.

Schaeffler Korea plays a key role in the development of many Korean industries, including automotive, electric and electronics, machinery and automation. With the on-going input of Germany's well known high tech experience and reputation; we are well positioned to become one of the Asia-Pacific region's most accomplished companies.

Schaeffler Korea is now utilizing 6 sigma technology to attain very high quality and very competitive pricing. In combination with on-time delivery, we are able to satisfy a wide variety of customers with both superior product design and excellent services that exceed their expectations.

In addition to the progress we are making to improve our products and living standards for our workers, we are also proud of having attained the certificates for ISO/TS 16949 from IATF (International Automotive Task Force), and QS 9000, ISO 14001, and K-OHSMS 18001.

Schaeffler Korea is continuously striving to satisfy our customers, achieve the highest level of quality and remain sensitive and responsible to the environment wherever we operate our business. It's the primary reason for where we are and what we are.
